

## Greenhouse Gas (GHG) Inventory & Management

Successfully measure and report your company's GHG Emissions.

### Is your organization positioned to respond to new, increased, or ongoing reporting of GHG emissions?

- Has your company been able to create and verify your baseline emissions data?
- Are you able to demonstrate continual improvement in reducing emissions?
- Are you engaged in international, national, sector, regional and/or local GHG reduction initiatives?

### We can assist you:

- Inventory your GHG contributors and verify your inventory is complete from all sources
- Apply a calculation methodology that you can use going forward
- Develop the skill set to measure and manage credible, defensible greenhouse gas data
- Validate findings and be assured when reporting and disclosing GHG Inventory that aligns with the GHG protocol

### WHY SBC

- We have helped hundreds of companies learn, apply, and be recognized for their organization's sustainability actions through our highly successful Green Masters Program.
- We bring an unparalleled amount of talent, expertise, and practical experience in the field of sustainability to guide your organization's sustainability strategy and GHG reporting.
- Team members are accredited to GHG Protocol and have success in helping companies with scope, 1, 2 & 3.
